

ALI MURTADHO

+6287874881600 | alimurtadho1620@gmail.com | linkedin.com/in/alimurtadho | github.com/alimurtadho | [Portfolio](#)

Summary

Software Engineer and System Analyst with experience in designing, developing, and maintaining scalable enterprise applications across finance, government payment, internal corporate, and school management systems. Skilled in backend and full stack development using Golang, Laravel, FastAPI, Node.js, PostgreSQL, and Vue.js, with hands-on experience in RESTful API development, system integration, and cloud deployment using AWS, Docker, and Kubernetes. Experienced in analyzing business requirements, understanding Software Development Life Cycle (SDLC), preparing PRD/SRS documentation and wireframes, and translating business needs into reliable technical solutions through cross-functional collaboration.

Education

Jenderal Soedirman University

2020 - 2024

Informatics

GPA 3,71

- Active: Become a university representative in the 2022 Gemastik Kemdikbud Data Mining competition.

Professional Experience

PT. Garudafood Putra Putri Jaya Tbk - Jakarta

November 2025 – Present

IT Business Application Developer

- Developed and maintained enterprise-level internal web applications, including an Internal Audit tracking system, HC Monitoring System using Laravel, Node.js (Express.js), fastApi, PostgreSQL, SQL Server, N8N, and AWS.
- Collaborated with the Head of IT Division, Human Capital Division, Internal Audit Division, and Internal Control Division to analyze business requirements and deliver aligned technical solutions following Software Development Life Cycle (SDLC) practices.
- Prepared Product Requirement Documents (PRD), Software Requirement Specifications (SRS), Database entity relational diagram and wireframe designs to support application planning, development, and user understanding.
- Managed application deployment and maintenance using Docker, Git, and Kubernetes.
- Performed troubleshooting, performance optimization, and continuous system improvements to support business operations.

PT Lawang Sewu Teknologi - Purwokerto

Desember 2024 – November 2025

Back end Developer

- Designed and developed 3 back-end projects with golang and PostgreSQL, including Soft token application for finance banking, government payment (SIPD) with payment gateway, and School management with payment gateway.
- Conducted debugging and low code optimization to ensure application stability, efficiency, and safety in local, development, and production environments with using encrypt and decrypt.
- Collaborate with teams such as mobile developer teams, system analysts, UI/UX teams, and business teams to ensure the suitability and accuracy of the applications created.
- Applied object-oriented design principles, system integration, and Git version control for collaborative development and tracking.

PT Lawang Sewu Teknologi - Purwokerto

November 2023 – November 2024

Full stack Developer

- Developed 5 full stack web applications using PHP Laravel, golang as back-end, and vue.js as front-end stack, including user authentication, API integration, and interactive dashboard systems, and management system in 1 years.
- Conducted debugging and low code optimization to ensure application stability, efficiency, and safety in local, development, and production environments.
- Collaborate with teams such as mobile developer teams, system analysts, UI/UX teams, and business teams to ensure the suitability and accuracy of the applications created.
- Used Git version control (Git-lab) for collaborative coding, branching strategy, and project management.

PT Kereta Api Indonesia (Persero) DAOP 5 - Purwokerto

October 2022 – January 2023

Web Developer Internship

- Built a new application with 2 people in one team that focuses on supporting the departure performance of each train at the station with PHP and MySQL.
- Communicate with human resources and head of information systems regarding application creation and development.
- Testing the application using unit testing and black box with a 100% success percentage for each feature in the system.
- Successfully deployed 3 applications from 3 stations within a period of 4 months.

Portfolio Web Development Project

Aplikasi Backend Restful API Website Blog (Golang) | <https://github.com/ali-murtadho/Blogs-Project-Backend-App>

- Built a restful API from several cases on a blog website with the implementation of the Gin Framework.
- There is an Authentication and Authorization system from users who have access rights.
- Also created API documentation with swagger.

Sistem Informasi Klasifikasi Kualitas Padi Organik dengan Algoritma C4.5 dengan framework Website Django Python | <https://github.com/ali-murtadho/wkpo-app-v2>

- The machine learning information system based on django python website
- using native Django with machine learning C4.5
- developed with Python Django environment, Python C4.5 Sklearn machine learning, SQLite

Aplikasi Manajemen Keuangan (Golang, Laravel, ReactJS, Inertia) | <https://github.com/ali-murtadho/react-frontend-manajemen-keuangan/tree/dev-bs> <https://github.com/ali-murtadho/go-backend-manajemen-keuangan>

- Built a modern Front End Web for Finance App.
- Built a microservice back end with Golang
- There is an Authentication and Authorization system for users who have access rights.
-

Finance Personal Assistant Large Language Model (LLM) | <https://github.com/ali-murtadho/LLM-Finance-Assistant>

- Developed a **multi-agent LLM-based finance assistant** using FastAPI and OpenAI for expense analysis, budgeting, and financial recommendations
- Built RESTful APIs and structured backend architecture (**API** → **service** → **agents**) for managing transactions and generating insights
- Implemented data validation with Pydantic and integrated AI-driven reasoning to deliver **context-aware financial reports and advice**

Organization Experiences

BEM Fakultas Teknik Unsoed

Feb – Nov 2022

Research and Technology

- Research related to technological matters around the Faculty of Engineering which can be used for sustainability within the Engineering student community
- Holding a Research Essay contest with an increase in participant rate of 189% from the previous year
- Channeling the talents and interests of Engineering students, especially in the field of writing: PKM

Indonesia AI | Divisi Data Science

Dec 2021 – May 2022

Research and Development

- Researching the development of Data Science in recent years so that it can be used as information articles that can be used as programs and knowledge
- Organized a data science themed event which was attended by more than 190 participants
- Successfully brought in a senior speaker from one of the best startups
- Managed to get 4 big Media Partners in one month

Certifications

Scalable Web Service with Golang Fresh Graduate Academy Digital Talent

March 2024

Scholarship 2024 | [Link Sertifikat](#)

Kementerian Komunikasi dan Informatika Republik Indonesia X Hacktiv8

April 2023

Machine Learning and Data Mining in The Data Science | [Link Sertifikat](#)

Kementerian Komunikasi dan Informatika Republik Indonesia X IPB

Technical Skills

- | | | |
|---------------------------------|---------------------------------|------------------------------|
| • SQL – PostgreSQL – SQL Server | • PHP & Laravel | • Python |
| • Golang | • React JS, Vue JS, and Node JS | • Git Control Version System |
| • System Analysis / SDLC | • AWS, Docker, Kubernetes | • PRD, SRS, URS |

Achievements

1. 2nd Place in Data Mining Himtika Unsika 2022
2. 2nd Place in the Call for PKM Student Executive Board, Faculty of Engineering, Unsoed 2022
3. Bronze POSI Student National Olympiad for Computers 2021
